Veyor

STADIUMS, SHOWGROUNDS AND MAJOR EVENTS

From bump-in to bump-out, every vehicle on schedule.

Veyor gives venue and event operations teams one live schedule for overlay suppliers, catering, broadcast, contractors and everyday deliveries. Build days, event days and every day in between.

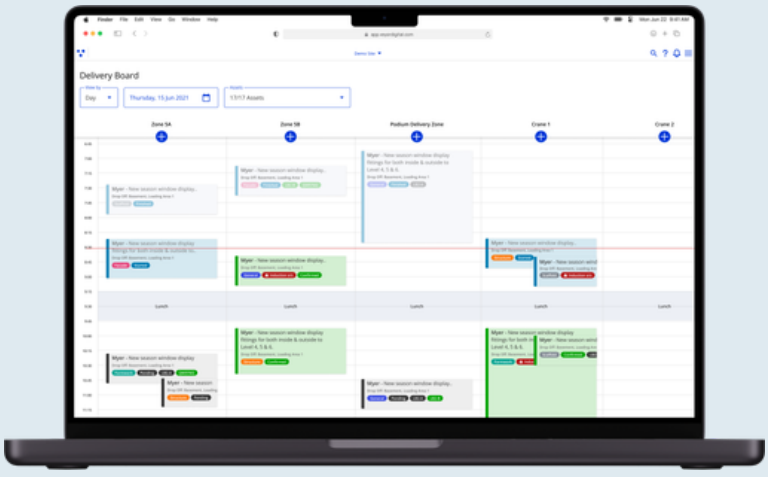
Venues run on two clocks.

An event build squeezes weeks of deliveries into a fixed window. Between events, the dock still handles catering, maintenance, cleaning and waste. Both compete for the same gates, the same bays and the same security team.

THE PROBLEM

Hard deadlines. High security. One shared dock.

Most venues still coordinate this through phone calls, email chains and a list at the gatehouse. It holds together, until build week or event day.



01 Overlay suppliers, caterers and broadcast crews all want the same gates and slots.

02 Bookings arrive by phone, email and text, and change daily as plans move.

03 Security learns about a vehicle when it reaches the gate.

04 Drivers arrive without inductions or accreditation, and don't know the site rules.

05 There is no single record of who came through the dock, when, and for how long. Incident reviews start from scratch.

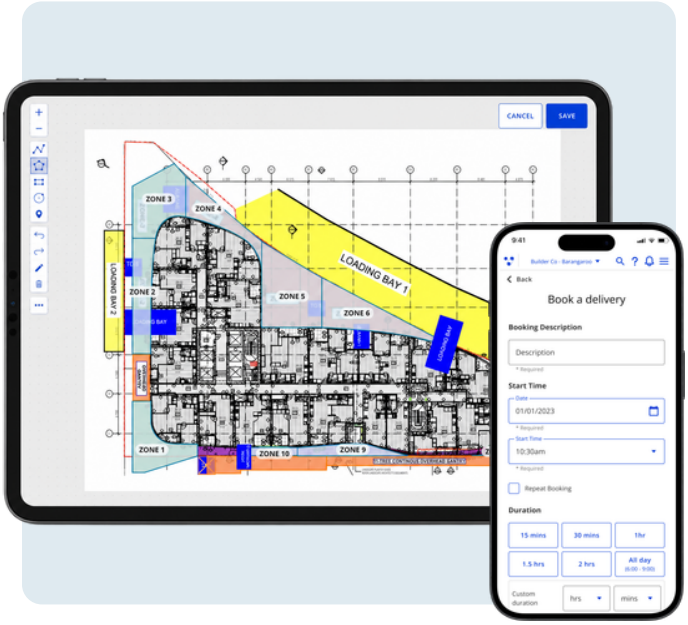
THE SOLUTION

Set the rules once. Let suppliers book within them.

Veyor is a shared delivery and access platform for your venue. Your operations and security teams decide how gates, docks and laydown areas are used on every kind of day. Suppliers and contractors book within those limits, and every arrival is verified and logged. One platform for build days, event days and everything in between.

How it works

1. Map gates, docks and laydown areas, with separate rules for build, event and non-event days.
2. Allocate time slots and booking limits by supplier, contractor or zone.
3. Suppliers book their own slots with vehicle, driver and load details.
4. Drivers complete inductions and receive access instructions before they arrive.
5. Security verifies each vehicle at the gate, and every arrival and departure is logged.



What each team gets

Event and venue operations: One view of every gate, dock and supplier, updated as plans change. Less time on the phone, more time running the venue.

Overlay suppliers and contractors: Agreed access windows for load-in and load-out. No more queuing at the gate.

Drivers: Booking times, site rules and access instructions on their phone. No app to download.

Security and integrity teams: Every driver and vehicle known before arrival, with a full audit trail after.

Catering and hospitality partners: Reliable restock windows, booked in advance.

Venue owners and management: Reporting on dock use for audit, cost allocation and next year's planning.

WHY VEYOR

Veyor already supports stadiums, major sporting events and event builds across Australia.

The same platform runs loading docks in premium office towers and manages access at airports, where every vehicle and driver has to be verified. Your venue gets that same control on every kind of day.

Veyor

One live schedule. Every supplier. No surprises.
